COUNTY ECONOMIC INDICATORS

1986

NOTE TO READERS

Oregon County Economic Indicators is a compilation of data from several sources. The transposition of the data from printed reports has been proofread three times.

However, the data are only as accurate as the sources. The user should remember that data are based on best estimates from available information and/or surveys.

For instance, this publication provides three different employment estimates. The preface provides a brief description of each data series. There are different advantages to each series. The user needs to know specifically what type of analysis or comparisons he/she wishes to illustrate and choose the proper data series.

This data can be helpful in formulating business decisions or public policy, but should not be relied on as the sole basis for making a decision.

PREFACE

This edition of Oregon County Economic Indicators provides data by county from 1980 through 1985. This time period includes the 1982 recession. This is reflected in the county statistics. A more comprehensive treatment of the Oregon economy, including the 1970's as well as the 1982 recession and the subsequent recovery, is available in Oregon: A Statistical Profile, to be published November 1986.

In many instances, this data is available for previous years, and in greater detail. Those interested should contact:

Douglas Crook
Business Information Division
Oregon Economic Development Department
595 Cottage Street NE
Salem, Oregon 97310
(503) 378-4735

Sources:

Population estimates are for the civilian noninstitutional population. This means members of the armed forces and persons living in prisons or other institutions are not included.

The U.S. estimates are from the Bureau of Labor Statistics, U.S. Department of Labor. Oregon estimates are from:

Edward Schafer, Director
Oregon Center for Population Research and Census
PO Box 751
Portland, Oregon 97207
(503) 229-3922

This publication includes three different employment estimates--two from the Oregon Employment Division and one from the U.S. Bureau of Economic Analysis. Each of these sources is available in greater detail and for previous years upon request. The user should read this section to understand the differences between the three estimates.

I. The Employment Division data is from two primary sources:

- A. Labor market area estimates that are derived from a prescribed U.S. Bureau of Labor Statistics methodology.
- B. The Oregon Employment Division's database of Oregon employers who pay unemployment insurance taxes.

A. The labor market area estimates are made on a monthly basis during each year. These are estimates of an area's labor force, employment and unemployment. At the end of each year, the estimates are revised on the basis of the Oregon portion of the Current Population Survey (CPS) conducted by the US Bureau of Census. The Oregon sample includes 700 households. It is the annual estimates that are included in the County Economic Indicators.

These labor market area estimates provide the most currently available data. These estimates are on a persons by place of residence basis. For more information, contact:

Jeff Hannum
Research and Statistics Section
Oregon Employment Division
875 Union Street NE
Salem, Oregon 97311
(503) 378-2736

A drawback to this series is:

--The methodology, as prescribed by the U.S. Bureau of Labor Statistics, has changed several times. Such changes limit the usefulness of the data for time series analysis. However, the methodology is consistent between labor market areas, except when the definition of labor market areas changes--see the definitions beginning on page iv.

B. The second primary source of the Employment Division is what is referred to as the ES202 series. This is a data base of all firms that have employees covered by unemployment insurance. This data is reliable, and lends itself well to time series analysis. ES202 estimates are on a jobs by place of work basis. Since some employees are not covered by unemployment insurance, ES202 estimates do not represent total employment.

Drawbacks to the ES202 series are:

--They do not reflect total employment; persons not covered by unemployment insurance (such as proprietors and some agricultural employees) are not included; and

--There is a nine-month lag before the previous year's data is available. This is due to the reporting schedule for unemployment insurance taxes--the last quarter's reports are not due until the end of the first quarter of the following year. Then the data has to be input, checked, and compiled so that confidential information is not released.

County Economic Indicators includes annual average covered employment, payrolls, and the number of reporting units. For more detailed information, please refer to the Employment Division's annual publication--Oregon Covered Employment and Payrolls annually. This publication includes data by industry--monthly for employment and quarterly for payrolls. Copies can be ordered from the Employment Division at 875 Union Street NE, Salem, Oregon 97311.

II. The Bureau of Economic Analysis uses the Oregon Employment Division's covered employment and payroll data as its primary source to make estimates of state and county personal income and employment by industry. These estimates are adjusted to be consistent with US totals for personal income and Gross National Product.

The estimates are on a jobs by place of work basis. BEA's total employment estimate consists of wage and salary employment plus proprietors' employment. When BEA revises its methodology, the entire series is revised in an attempt to maintain estimates that are consistent for time series analysis. The user should be sure to use the most recent data since BEA revises its estimates periodically.

Wage and salary data by place of work are broken down by major industry. On the state and national levels, a detailed breakdown is available. On a county level, data is available by major source--for example, mining, construction, durable goods manufacture, etc. This data is available in Oregon from:

Douglas Crook
Business Information Division
Oregon Economic Development Department
595 Cottage Street NE
Salem, Oregon 97310
(503) 378-4735

The following data was compiled by the Business Information Division, Oregon Economic Development Department:

<u>Data</u>	<u>Source</u>
Bank Deposits	Banking Division, Oregon Dept of Commerce
Assessed Value	Research Section, Oregon Dept of Revenue
Retail Sales	<u>Sales and Marketing Management Magazine</u>
Residential Building Permits	Housing Division, Oregon Dept of Commerce

Definitions:

All the data presented here is by county, with the exception of employment data. The Employment Division compiles its data by labor market areas. These areas correspond with county boundaries; however, in several instances, two or more counties are combined as one labor market area. These are:

Portland Primary Metropolitan Statistical Area (PMSA)--Clackamas, Multnomah, Washington and Yamhill counties. Note: The above definition begins with data reported for 1984. Prior to 1984 the Portland MSA consisted of Clackamas, Multnomah, Washington Counties and Clark County, Washington.

Salem MSA--Marion and Polk counties.

Wasco-Sherman--these two counties are combined as one labor market area.

Oregon has two other MSA's; however, each of them consists of only one county:

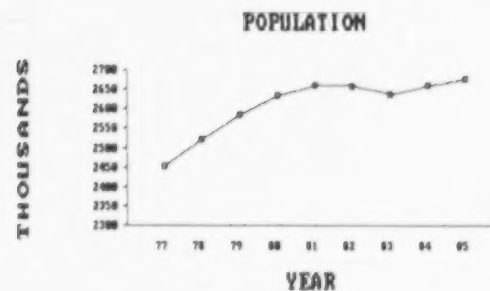

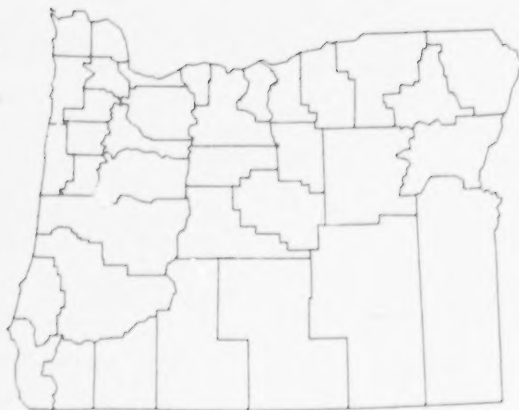

- Eugene MSA (Lane County)
- Medford MSA (Jackson County)

Growth Rates:

Growth rates are similar to compound interest rates. They show the annual average percentage change, compounded over a specified time period.

The starting year's statistic is considered the present value, the ending year's statistic is the future value, and the number of years between the starting and ending years is the number of time periods over which the present value is compounded.
